DETD(13)

Web browser 201 first makes an object request from Web listener 208 on **Web Server** 200. For example, if the object request specifies URL <http://nhl.oracle.com/hr/owa/fireemp>, the following actions will occur. The first part of the URL, <http://nhl.oracle.com> identifies the **Web server** 200. The object request will therefore be directed from Web browser 201 to **Web server** 200. Web listener 208 on **Web server** 200 receives the object request and examines the rest of the URL. /hr/owa, the first portion of the address, is defined on the **Web server** as a CGI application with a virtual path pointing to a directory containing Web agent 209. Web listener 208 launches Web agent 209. The preferred embodiment of the present invention implements the Web agent as an Oracle Call Interface program. It will be apparent to one of ordinary skill in the art, however, that any interface program that is similar to the Oracle Call Interface may be used to implement Web agent
